Acids and bases react with one another to yield two products: water, and an ionic compound known as a salt . This kind of reaction is called a neutralization reaction.

### Introduction to acid-base chemistry

In this section we will be talking about the basics of acids and bases and how acid-base chemistry is related to chemical equilibrium. We will cover acid and base definitions, pH, acid-base equilibria, acid-base properties of salts, and the pH of salt solutions.

An acid-base reaction is a chemical reaction that occurs between an acid and a base, which can be used to determine pH. Several theoretical frameworks provide alternative conceptions of the reaction mechanisms and their application in solving related problems; these are called the acid-base theories, for example, Brønsted-Lowry acid-base theory.
