

DOWNLOAD USE OF DISCRIMINANT ANALYSIS TO EVALUATE COMPOSITIONAL CONTROLS OF STRATIFORM MASSIVE SULPHIDE DEPOSITS IN CANADA

use of discriminant analysis pdf

Linear discriminant analysis (LDA), normal discriminant analysis (NDA), or discriminant function analysis is a generalization of Fisher's linear discriminant, a method used in statistics, pattern recognition and machine learning to find a linear combination of features that characterizes or separates two or more classes of objects or events. The resulting combination may be used as a linear ...

Linear discriminant analysis - Wikipedia

In psychology, discriminant validity or divergent validity tests whether concepts or measurements that are not supposed to be related are actually unrelated.. Campbell and Fiske (1959) introduced the concept of discriminant validity within their discussion on evaluating test validity.They stressed the importance of using both discriminant and convergent validation techniques when assessing new ...

Discriminant validity - Wikipedia

This article describes how to use the Fisher Linear Discriminant Analysis module in Azure Machine Learning Studio, to create a new feature dataset that captures the combination of features that best separates two or more classes. This method is often used for dimensionality reduction, because it ...

379 Cluster Analysis To see how a simple distance measure is computed, consider the data in Figure 17-1. The table shows the ratings of the French and Canadian judges for the Russian pairs

IBM SPSS Statistics 19 Statistical Procedures Companion

`rand('twister',5489)` has been used many times in this page. It simply resets the Matlab random number generator, so that the `kmeans` (or, `litekmeans`) will have exactly the same initialization.

Reproducing Experimental Results - Zhejiang University

POPULUS - 2 - Perceptual Mapping The data required for perceptual mapping thus comes from rating scales where the subjects of the map, from products to populations, are described on the basis of

Principal component analysis is a statistical technique that is used to analyze the interrelationships among a large number of variables and to explain these variables in terms of a smaller number of variables, called principal components, with a minimum loss of information. Our goal is to find a ...
