XSLT 2.0 is a big improvement over version 1.0, and strong typing and schema awareness are useful added features. Declaring types for values in an XSLT stylesheet allows the processor to tell you when you make incorrect assumptions about the data type of the XML content or the number of occurrences of a particular element or attribute.

To publish HTML from your XML documents, you just need an XSLT processor. It will include the XPath language since that is used extensively in XSLT. To get to print, you need an XSLT processor to produce an intermediate formatting objects (FO) file, and then you need an XSL-FO processor to produce PostScript or PDF output from the FO file. A diagram of the DocBook Publishing Model is available ...
